## ■ Benefits

Using the Cartadis TDA2 as payment system for your vending machines reduces your problems linked to coin handlings: vandalism, cash collection, counting ...

The high coercitivity technology of the magnetic cards provides you with a very high security while a moderate price.

## ■ Use

The magnetic cards allow you to charge either for currency or points. Buying any product causes the card to be debited of the amount corresponding to the sale price upon the card insertion in the reader.

Cards selling may be automated by means of the **Cartadis DRC4** or the **Cartadis CD20**.

Cards reloading (reloadable cards only) can be achieved in 3 ways:

- from the coin changer of the vending machine if there is one,
- on the reloading automate **Cartadis DRC4**,
- directly on the **Cartadis TDA2** by the person in charge of the administration card reserved for programming.

Hourly, daily, weekly, monthly and staff category subsidies may be featured.

## ■ Audit counters

All audit counters can be issued:

- on a magnetic card,
- printed out with the **Cartadis P200N** printer (IRDA or RS232 link),
- collected with the **Cartadis** data collector (IRDA or RS232 link).

## ■ Multi-services

**Cartadis TDA2** is a part of equipments that match the needs of your customer by using a single card for the control of:

- automatic dispensers of drinks or dry products,
- copiers, printers,
- automate of cards reloading,
- fax,
- canteens.

## ■ Compatibility

**Cartadis TDA2** is suitable for most of the vending machines, it fits into a hole of 82mm x 99mm and 150mm deep. In standard, it manages serial links, executive, BDV and MDB. It is even compatible with the "executive" changer not dealing with magnetic card: in master mode (without coin changer) or in slave mode (with coin changer). In option, an interface board deals with the electromechanical vending machines of 1, 4 or 10 prices lines.
