

Magnetic card payment system
for rollover car wash

CARTADIS TL10

A modern system
that enables token
and punched cards
to be replaced with
a very high safety

An original solution
that enables to sell
subscription cards

The Cartadis TL10 is suitable for any type of car wash gantry

Cartadis TL10

■ Principle

The **Cartadis TL10** wash terminal is a payment system that enables to monitor the use of mono- or multi-car wash gantries by means of magnetic cards.

■ Cards

They are made in PVC and of a standard credit card size featuring a magnetic track in high-coercivity and hence are very difficult to demagnetize.

They are supplied blank and have to be recorded on the terminal itself via programming functions only accessible by the person in charge.

Two types are available:

- . token cards,
- . units cards.

■ Use

3 possible uses:

- the card recorded with 1 wash only (similar to the token or the punched card) once inserted, it directly selects the wash chosen and then remains in the unit.
- the subscription card recorded with several identical washes once inserted, it directly selects the wash scheduled, the **Cartadis TL10** debits this wash from the card which is then recovered to the user.
- the subscription card recorded with units (or points) once inserted, the customer selects his wash on the keyboard, the corresponding price is debited from the card which is then recovered to the user.

■ Statistics and programming

Counter of use for each wash,

Programming of wash prices with the possibility of various prices depending on the dates and hours of use.

■ Option

Vocal synthesis announcing messages of welcoming, user's help and thanks.

■ Technical features

- **Dimensions:** - height: 150 cm
- width : 41 cm
- depth : 33 cm
- **Weight:** 60 kg.
